I) Introduction

Welcome to TomorrowNow. We are excited to have the opportunity to support you. One of the ways we support you is by building a support library on your behalf. We recommend you build the same type of library. Obtaining all available software update tapes, also known as cum tapes, prior to ending maintenance with Oracle ensures you have all SARs (Software Action Requests) up to the latest tape. For example if you have tapes 1 – 16 you will have all the SARs as of the cutoff date for tape 16. You can contact Oracle’s Customer Care team to order these tapes. SARs created after cum tape 16 will have to be, downloaded. In addition, other documents exist that are of benefit to download. This paper describes these processes.

II) Signing on to Customer Connection

To prepare for the fix process we recommend creating a folder on your PC, \Downloads\World, as a storage location for the fixes.

1) Sign on to Customer Connection.

2) Select "Updates + Fixes" on the left portion of the screen.
3) Two methods exist for searching for SAR information. "EnterpriseOne + World Update Center" and "SAR Search." The 'SAR Search' capabilities are more robust for our download purposes and is used for our process. See Appendix B if you are interested in how to use the "EnterpriseOne + World Update Center".

III) SAR Search

1) Sign on to Customer Connection.

2) Select "Updates + Fixes" on the left portion of the screen.

3) Select "SAR Search."
4) You will be at the Home page the first time you access the Update Center.

SAR Search

Product: PeopleSoft EnterpriseOne

Search for:
- PeopleSoft World
- XPI

Objects: 

Release: System Code:
- 8.10 General Bar Office
- 8.11 Address Book
- 8.11SP1 Electronic Mail
- 8.9 Accounts Receivable
- 4.7.3 Accounts Payable

SAR Number:
- Type:
  - 00016
- ICE Report ID:
  - 1-Correction
  - 2-Enhancement

Stage:
- 00017
  - Closed
  - In Progress

Product: Select PeopleSoft World. If you would like to narrow your search down to a particular suite, click on the twisty (blue triangle) and select the specific suite.

Note: A known issue exists when searching system codes "04 - Accounts Payable," "41 - Inventory Management," and "43 - Purchase Order Process." The search does not end properly and when the search is cancelled the results are incomplete. As a workaround, in addition to using the System Code, use the Product twisty to narrow the product search. Select "Financial Management" for system code 04 and "Distribution and Logistics" for system codes 41 and 43.

Search for: Input detail to search for cumes and Localization.

- Cume - The Cume tapes you have ordered will contain all SARs up to the most recently released Cumulative Update. (0016 in this example) To obtain all SARs created after cume 0016, you should input search criteria in the "Search For" field to retrieve SARs being placed in the next upcoming cumulative update. This is cume 0017 in our example. Enter "00017" in the "Search For" field and further narrow the search with the System Code field.

- Localizations - Enter "Localizations" in the Search For field and further narrow the search by using the System Code field. For example if you are retrieving localizations for payroll, select system "07 - Payroll".
TOMORROW NOW

World Download
Customer Connection

**Objects:** Input the desired Object, up to three. This is not a required box for this download process.

**Release:** Select the desired release.

**SAR Number:** Input the desired SAR number if known. This is not a required box for this download process.

**ICE Report ID:** Input the desired ICE number if known. This is not a required box for this download process.

**System Code:** Select the desired system code. Separately search over each system code on the list.

**Type:** Set to All.

**Stage:** Set to All.

5) When the search is complete, you will be presented with a screen similar to the one below. The upper left hand corner displays the number of records retrieved by the search. In the example "Found more than 200 SARs" is displayed. This is indicates you should narrow your search. Only 200 SARs are retrieved at a time. The upper center of the screen displays the total number of pages and your current page. Each page contains up to 10 SARs.

**SAR Search**

You will need to separately perform Steps 6-8 for each SAR on the list to obtain the downloadable information.
6) Double click on the link to select each SAR from the list. You are presented the following screen to review the SAR's detail.

**SAR Search**

**SAR 151 of 259**

**Title** 118530 Cash Requirements - Grand Tot RPT984702000 System01

**Document Detail**

**Description**

A ORIGINAL REQUEST

If you are running a cash requirements report that includes currencies that have different display decimals, the amounts are added incorrectly because decimal places are irrelevant when added together. Perhaps this grand total should say "NA" like some of our other reports show. Please see attachments for specific example.

B FINAL DISPOSITION

A/P Cash Requirements Report (R0431)

G0413

When running a cash requirements report that include currencies that have different display decimals, the amounts are added incorrectly. Currently, when multi-currency is on the Grand Total field will not appear on the reports.

8) You will see a warning screen. Review the cautions. Click on the "View/Download Code Change Document."

SAR Search

Code Change Document Download

Applying a code change is tricky because you may not have related changes. If it is not a critical situation, we recommend that you wait for the update to be delivered in a cumulative update or service pack.

A code change is created in a development environment and is included as the next cumulative release. There may be other changes between our releases and this one in which the code change was written. For this reason, we cannot guarantee that a code change will work in your environment.

Cautions:
1. The code change release level matches your environment release level.
2. Do not apply a code change if your application looks significant, different.
3. Check the code change document for related code changes that may also be needed.
4. Back up your current installation before applying code changes.
5. Apply all code changes in an informal environment. Thorough test before updating your production environment.
6. The latest issue control number is our code change documents on the Internet. Also, you can contact us for assistance.
7. Call our local support center if you have any questions or concerns.

View/Download Code Change Document

Download each SAR into the download folder (C:\Downloads\World) created in Section II.
IV) EnterpriseOne + World Update Center

You may use "EnterpriseOne + World Update Center" as an additional method for locating SARs. This process should be done in addition to the other search method to ensure you retrieve all current SARs.

1) Sign on to Customer Connection

2) Select "EnterpriseOne + World Update Center."

   Implement, Optimize + Upgrade

Search for (Name, ID, Object, "*text*"): Input the desired search topic.

Click on the "Search" button.

Update Center
JD Edwards World Search Results

To ensure a complete library is built, a search must be done using the Search for field and entering A73* for the A73 World software and A81 for the A8.1 software. If the last record is A737818083, you will have to repeat the search by entering A7378* in the "Search for..." field. Then continue to increment the number searched on. For example A7378*, A7379*, etc... If this type of search returns more than 100 records, the wildcard search will need to be narrowed further such as A73781*, A73782* etc... The first search provides the basic list. Each subsequent search allows you to view more of the list.

If the "Search for (Name, ID, Object, "*text*")) field is left blank you will receive all of the downloads available, however, you will only be able to view up to 100 at a time. To locate additional downloads; you will need to use the Search boxes to narrow your search criteria. For example if you are looking for fixes for Payroll, use the "Search for (Name, ID, object, "*text*")) field and enter "*payroll*." The asterisks are instrumental in the search. This will return all SARs with Payroll in the description.

Another search method is to leave the "Search for..." field blank for the first search. After you have downloaded the SARs in this list, scroll to the last record in the list and make a note of the name. Do a second search using a wildcard. If the last record is 376723, you will have to repeat the search by entering 37* in the "Search for... field. Then continue to increment the number searched on.
World Download
Customer Connection

For example 38*, 39*, etc... If this type of search returns more than 100 records, the wildcard search will need to be narrowed further such as 318*, 382* etc...
The first search provides the basic list. Each subsequent search allows you to view more of the list.
V) White Papers

White papers can be downloaded from the Customer Connection home page using the search box in the left side of the screen.

1) Sign on to Customer Connection.

2) In the "Search" box on the left side of the window enter the wild card search from the first column of the table. This is an example of a World Tech search.

3) You will receive a window giving the summary and details of all the White Papers you searched for. You may have to scroll to the bottom of the screen but the White Paper(s) will be at the bottom of the window. Some of the White Papers have all the detail here and others are broken into attachments. If the paper shows as a link, you will need to deactivate pop-up blockers to access the paper (see Appendix E).

Suggested Searches

Follow each of the searches listed in the table below. If you are a World customer, still search the Search Text suggestions for OneWorld. This will often provide more information for a specific topic.
<table>

7) News Watch
   
Appendix A - FTP fix to the iSeries

The FTP functionality is used after a SAR is downloaded either via the SAR Search or Update Center. This will allow you to apply the code change to your system.

When the download is complete you will have an executable in your directory with the update number followed by .exe. In the example you will have an executable named 5034103.exe. This is a self extracting compressed file. Double click on the executable and you should see WinZip load.

1) In the "Unzip to folder:" cut and paste the directory into the blank. This will place the compressed objects in the same directory as the self extracting executable, or type in the directory where you would like the objects to reside. Click the "Unzip" button.

![WinZip Self-Extractor - 5034103.exe](image)

When WinZip completes decompression you will get a window indicating how many files were decompressed. Click the "OK" button and close the WinZip window.
When you look in the directory you will now see a file, cover letter, and a readme document. The file will be FTP’d to the iSeries to be installed. The cover letter verifies what you just downloaded. The readme document includes the instructions on how to get the fix onto the iSeries and install it.

These instructions change based on the fix downloaded. It is important that you print these out and follow them closely. In addition, you may see an additional document named "Special Instructions." These are additional instructions needed to complete the install into your World environment. It could contain instructions to update UDC's, Data Dictionary and more. If no additional instructions are required, this document will not exist for the fix.
Appendix B – Download Basket

The Download Basket is the Update Center functionality used for downloading SARs.

1) When you have located a fix or fixes you wish to download, select the fix by clicking on the "+" to place the fix in your download basket. Once you have selected the "+" you will notice the "-" becomes active. If you wish to remove a selection, you click on the "-". The selected fix will move across the screen to the "Download Basket" and the Basket will reflect the number of items you have selected to download.

To view what is in the Basket or to download the items, click on the "Items" link and the screen will reflect what is selected. To return to the search, click on "Return to Search".
2) Once you have everything you need in the "Download Basket," click either "Download" by each item if you wish to only download a few of the items selected, or "Download All" if you wish to download all items selected.

**Download Basket**

For processing multiple downloads, please use **Change Assistant**.

<td>0.4</td>
</tr>
<tr>
<td>1677427.exe</td>
<td>AS400 iSeries</td>
<td>0.31</td>
</tr>
</tbody>
</table>

*Note:* If you are experiencing trouble downloading and are not prompted to save your download or run the downloaded executable file, please review your browser configuration including pop-up blockers, firewalls and security options.

First time users will be prompted to install Java 2 SDK; Standard Edition, v 1.4.2_03 (J2SE). Multiple versions can exist on your PC, so installing should not replace any existing versions.

**Note:** you need administrative right to your PC to perform the install, and your connection should be through Internet Explorer or Netscape.

If you receive one of the following error codes: 1035, 1305, 1311, 1324, 1327, 1335, 1600, 1601, 1606, 1624, 1643, 1722, 1744, 1788, 2352, 2755, you may be having an InstallShield issue. See this site for information - [http://java.com/en/download/help/download_error_codes.jsp](http://java.com/en/download/help/download_error_codes.jsp). However, the link to the offline package on this site will install the current release of JAVA. The release needed for the Update Center is 1.4.2_03.

To download this release 1.4.2_03 offline, go to:

[http://java.sun.com/products/archive/j2se/1.4.2_03/index.html](http://java.sun.com/products/archive/j2se/1.4.2_03/index.html)

Take the JRE download option, accept the licensing agreement, then take the Windows Offline download option.

- Check the target directory to ensure this is where you want to place the download file. Click the small box to the right to browse and change the
destination directory. You may also type a destination path directly in the box. If
the subdirectory does not exist, it will be created by the download manager.

The pop up window lets you know the download was successful. Click the "Open
Folder" or "Okay." The Launch Deployment Assistant is not available for World.
Appendix C – Review SAR Code Changes and Documents

This is Update Center Functionality for reviewing SAR detail.

1) When you drill into the detail of the SAR, you will be prompted to Open or Save the file. Click Save and place in the download directory created in Section II.

2) Locate the document you just downloaded and open it. It will contain examples of what code has been added or updated.
Appendix D – Deactivate Pop-Up Blockers

1) If you are using Internet Explorer (IE), start IE.

2) From the pull down menus select "Internet Options..."

3) You are presented a window with several tabs at the top. Select the "Privacy" tab. Remove the check box from the "Block pop-ups" check box.
